#### **Water Treatment Chemicals**

#### **Boiler Water Treatment Chemicals**

Steam-generating boilers have numerous applications, from use in factory processes through to airconditioning applications in office buildings and hospitals. Boiler water treatment chemicals are used to minimize the various faults that may arise in boilers and to ensure that they continue to operate efficiently. Kurita provides the optimal treatment solution to suit customer needs using chemical products that are not only effective but also contain safe ingredients.

#### **Cooling Water Treatment Chemicals**

As with boilers, cooling water is also used during manufacturing processes and for air-conditioning in factories and office buildings. Cooling water treatment chemicals act to prevent problems from occurring in pipes and heat exchangers, and also prevent the growth of the harmful Legionella bacteria. They help to enhance operational efficiency, which in turn contributes to the establishment of a resource- and energyefficient, not to mention, safe workplace environment.

#### **Wastewater Treatment Chemicals**

Wastewater treatment chemicals are used in wastewater treatment facilities to treat the many forms of industrial wastewater discharged by factories and domestic sewage to ensure that they do not impact upon the local environment. An extensive range of application-specific chemicals are used for deodorization and the removal of suspended solids. Kurita implements reduction of environmental impact of wastewater through appropriate wastewater treatment.

#### **Process Treatment Chemicals**

Our process treatment chemicals are designed to maintain and improve production efficiency and product quality in the manufacturing processes used in the oil refining, petrochemical, steel, and pulp and paper industries. The survival of companies in the world of manufacturing hinges largely on their ability to improve quality and reduce costs. At Kurita, we strive to develop and offer products that will help our customers achieve these goals.

#### **Incinerator Chemicals**

We also produce chemicals to eliminate harmful substances from the incinerator ash and fly ash discharged by the more than 10,000 incinerators run by local authorities and private enterprises nationwide. Incinerator ash and fly ash are known to contain various toxins, including lead and other heavy metals as well as dioxins. Kurita's incinerator chemicals provide safe methods to treat such harmful substances. Our products function by preventing the elution of heavy metals in fly ash and by suppressing the generation of dioxins within incinerators.
