## Electronics Industry

- Order declined mainly due to the absence of orders for large-scale projects posted in the previous fiscal year, while net sales increased due to an increase in facilities, maintenance and recurring contract-based services.
- Business profit decreased due to a worsened cost of sales ratio with lower service business composition and the increase of SG&A expenses, despite the sales increase.

## General Industry

- Orders and net sales increased due to the new consolidation of Arcade Engineering and expanded facility business in North America.
- Business profit increased, with the effects of higher sales and an improved cost of sales ratio more than offsetting the increase in SG&A expenses.
- Operating profit increased due to the absence of an impairment loss on goodwill related to Kurita America, Inc. recorded in the previous fiscal year

- Other current assets increased due to increases in trade and other receivables.
- Property, plant and equipment increased, mainly reflecting the acquisition of ultrapure water supply business facilities.
- Goodwill increased due to the acquisition of Arcade Engineering shares and the impact of foreign exchange rates.
- Total liabilities increased mainly due to an increase in trade and other payables.
- Total equity increased mainly due to the increase in retained earnings and the posting of exchange differences on translation of foreign operations, reflecting the weakening of the yen against other currencies.

## 2 | Consolidated Business Forecast for the Fiscal Year Ending March 31, 2025

---

- We expect the Japanese economy will recover to a solid growth trajectory, driven mainly by domestic demand.
- Overseas, the European economy remains weak, but inflationary pressures are being eased. We expect weakness to persist in China's economic recovery due to an ongoing real estate downturn despite surging semiconductor investments, but project solid growth in other parts of Asia, and a continued gradual recovery in the United States.
- Demand in the semiconductor market will continue to grow, driven by generative AI applications and power semiconductors, with economic recovery contributing to a rebound from the second half of the year.
- The shortage and extended lead time of materials and components, which reflect changes in the supply-demand balance, will continue.
